DETAILED ACTION

Drawings

1. The drawing is objected to because empty boxes 2, 3 and 18 should contain names or symbols describing their functions. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as “amended.” If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either “Replacement Sheet” or “New Sheet” pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

2. Applicant is reminded of the proper language and format for an abstract of the disclosure. The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed

150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

The abstract contains the legal phraseology "comprising" on line 1, which should be avoided. Also, the numbers for the transistor and the clock pulse generator in the abstract are incorrect. The transistor should be (9) and the clock pulse generator should be (10).

Claim Objections

3. Claims 2-4 are objected to because of the following informalities: "transistor" should be "resistor" in claim 2, line 8. Claims 3 and 4 are objected to for depending on objected claim 2. Appropriate correction is required.
4. Claim 4 is objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim should refer to other claims in the alternative only and cannot depend from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claim has not been further treated on the merits.

Claim Rejections - 35 USC § 112

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. Claim 2 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

7. Regarding claim 2, the phrase "such as" renders the claim indefinite because it is unclear whether the limitations following the phrase are part of the claimed invention. See MPEP § 2173.05(d).

Allowable Subject Matter

8. Claim 1 is allowed.

9. The following is a statement of reasons for the indication of allowable subject matter: Claim 1 is considered to be allowable due to the inclusion of claim limitations: "first and second resistors (7,8) with voltage tap-off at the second resistor (8) and a transistor (9) connected to a clock-pulse generator (10) and bridging the first resistor in a clocked manner are connected in series to the signal line, and in that a comparator (17) is provided downstream from the resistors (7,8) to compare the values received via the second resistor (8) in subsequent switching positions of the transistor and for issuing a short-circuit error message to the evaluation module (3) if measured values in subsequent clock pulses differ".
